Supporting children with tinnitus in everyday clinical practice

This education day focuses on the assessment and management of tinnitus in children and young people, with a strong emphasis on practical, transferable skills that can be applied confidently in clinic.

It is estimated that 1 in 30 children experience tinnitus that is troublesome. Asking about tinnitus as part of a hearing assessment is essential—but clinicians often feel uncertain about what to do next when a child reports tinnitus.

Through a programme of presentations, discussion, and hands-on practical sessions, this course will help you build a safe, structured toolkit of strategies to support children with tinnitus in your own service.

The venue provides an ideal setting to step away from the pressures of daily clinical work and engage in learning in a calm, relaxed environment—particularly relevant when considering relaxation, stress, and tinnitus management.

Course content

-  Principles of working with children and young people with tinnitus
-  History taking: gathering meaningful information, questionnaires, and identifying red flags
-  Assessment top tips: common pitfalls and successful strategies
-  Child-friendly explanations, including use of the child-friendly tinnitus model
-  Management strategies: building your toolkit, practising techniques, and sharing resources
-  Tinnitus and school: supporting teachers and educational settings

About Us

Claire Benton

Claire has worked in Audiology for nearly 30 years, most of which was spent as a paediatric audiologist in the NHS. She specialises in working with children with tinnitus and hyperacusis. Claire has previously taught on the BTA (now Tinnitus UK) paediatric tinnitus course and was part of the working group that wrote the original BSA Practice Guidance on Paediatric Tinnitus, as well as the current review group. She has presented widely at conferences and now works as an Audiology Consultant, carrying out work for NHSE and BAA, alongside clinical practice at The Skipton Audiologist.

Dr James Jackson

James is a Chartered Psychologist and Associate Fellow of the British Psychological Society. He holds an MSc in Industrial Psychology and a PhD in Psychology from the University of Hull. His doctoral research explored the effects of tinnitus on concentration and task performance. With lived experience of tinnitus and hearing loss, James brings valuable insight into the subjective experience of tinnitus. He is a long-standing member of the Professional Advisers Committee for Tinnitus UK.
